("Byotrol" or the "Company")

US EPA approves Byotrol24 as long-lasting virucide

Byotrol Plc (AIM: BYOT), the specialist infection prevention and control company, is pleased to announce that the US Environmental Protection Agency ("EPA") has formally approved long-lasting virucidal claims for its proprietary 24-hour germ-kill surface sanitizer Byotrol 24 (EPA Reg. Number 83614-1). This approval was received by the Company after close of business, on 22 May 2023.

The Directors believe that this is the first product to receive such EPA approval and means that Byotrol24 and its sub brands will now be able to offer unique and highly relevant claims and performance characteristics to US consumers and businesses. This includes being able to claim efficacy against certain current and emerging viral pathogens including influenza, coronavirus and norovirus (via the commonly accepted surrogate feline calicivirus).

The Company continues to advance alliances and commercial opportunities in the US, including with a previously announced, well-known sub-licensee in the US institutional market, which is continuing to prepare a market launch with the new product claims at the forefront of its marketing strategy.

David Traynor, Executive Director, Byotrol plc comments:

"This is fantastic news for Byotrol and confirms the excellence of our US surface sanitizers.

Customers and consumers are now as concerned about protecting against viruses as well as bacteria. This new approval means we can now make specific long-lasting efficacy claims against viruses, which should in turn significantly increase the commercial potential of our US formulations."
